

The image shows a yellow and white rotary eraser machine on an airfield tarmac. The machine is a small, tracked vehicle with a large rotating drum and a spray nozzle. It is positioned on the left side of the frame. In the background, there are other similar machines and a white truck. The sky is overcast. The machine has a sign that says "SMITH" and "REMOVE THE STRIPE NOT THE ROAD".

Airfield Marking Symposium at MCO eyewitness reactions to water vs. erasing

"Many of the symposium attendees were impressed with the Rotary Eraser, both from the standpoint of the removal product as well as the cost relative to the more expensive waterblasting system." (1)

"Our high pressure water blaster would have blown out the same surface." (2)

"Now we have an immediate same-time solution to prep and paint airfield markings, keeping the surface clean, dry and correctly profiled without water." (3)

"Wow, I am impressed! The SMITH removed 30" width painted markings on the asphalt shoulder cleanly and uniformly without any shadowing, grooving or surface undermining." (4)

"Only \$30,000 and I can remove all my airfield markings on asphalt and concrete. When can I get one?" (5)
